

**BATTERY CARE STATION
LOGISTICS AND SERVICE**

LOGISTICS CENTRE AND CUSTOMS STORAGE

Are you a battery manufacturer, and are you planning to supply the European market with your products? Do you require a logistic bridgehead in Europe for setting up your goods flows? Do you require administrative and logistic support for distributing your goods? Is a cross-dock or a buffer warehouse necessary for securing supplies to your customers? Are you looking for specialists who can help you with customs and tax matters? Would this type specialist be even more ideal if they were highly competent in quality retention matters for your batteries? And, on top of this, should such partners also be audited and recognised technical and logistic specialists in the automobile industry? You can find all this at akkuteam Energietechnik in their Battery Care Station! **We move your business!**

We will help you to secure the quality of your batteries and to meet the requirements of the automobile manufacturers. Each battery will be recharged in our Battery Care Station (BCS) and then tested for the appropriate quality requirements by our employees and instruments. Only first-class batteries will then be shipped "just-in-time" to the automobile manufacturer's production works in accordance with their delivery requirements, or shipped to the agreed aftersales market. Our range of services is not only suitable for manufacturers of starter batteries, but also for producers of drive batteries and stationary batteries. Convince yourself!

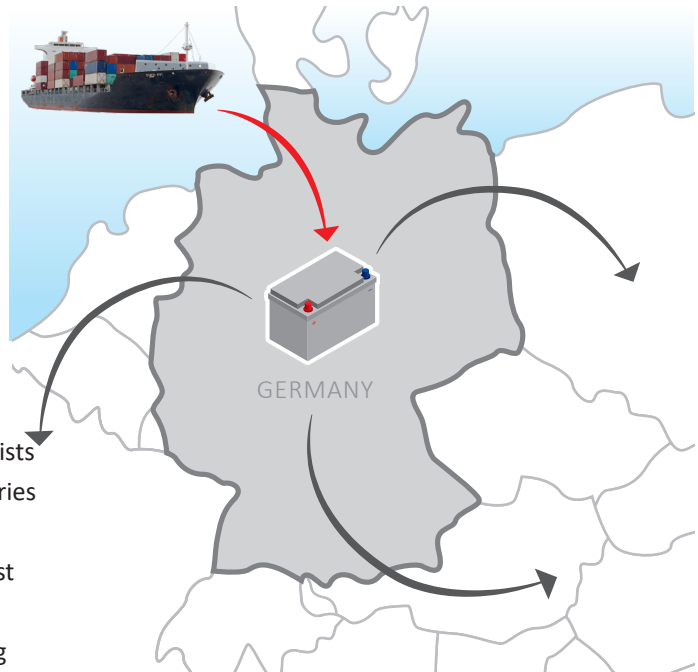

AN OVERVIEW OF OUR SERVICES

Logistics and storage services

- Warehousing
- Distributions logistics
- Cross-docking / logistic nodes
- Contract logistics
- Ticketing and labelling of batteries
- Individual customer services

Quality management

- ISO 9001:2015 / TS16949:2009 certified
- Process audit by Volkswagen and BMW
- Quality control carried out by experienced specialists
- High-code and high-voltage test equipment for series battery checks
- Battery analytics using highly modern in-house test laboratory
- Performance checks according to DIN and opening findings (battery tear-down)

Customs and taxes

- customs warehouse approved by German Customs (bonded warehouse)
- Customs clearance processes
- advisory service for Customs matters

Business address and offices

- reputable business address for your German branch office
- personnel service for your branch office
- office areas to rent
- office sharing

DATA AND FACTS

Battery Care Station

- logistics and handling centre with highly-modern equipment
- More than 10 years of experience in just-in-time logistics for automobile manufacturing sites
- 4,500 square metres of logistics area with 4,500 pallet spaces
- expandable to 10,000 square meters of logistics space with 20,000 pallet spaces
- 500 square metres of office space
- best transport links directly on the A7 motorway, right in the centre of Germany
- maximum charging capacity of 12,000 batteries per day
- customers in the automotive sector: Volkswagen, Audi, Skoda, Seat, BMW, MINI
- we are already working for a range of satisfied major Asian battery manufacturers

WAREHOUSE

Our customs warehouse which is approved by German Customs.

Bonded warehouse with

- 4,500 pallet spaces on a storage area of 4,500 square meters
- most modern storage technology
- individual reporting of Movements of goods in real time
- approval for storage of lead and lithium batteries

akkuteam is an owner-managed, medium-sized family company founded in 1997. As a specialist for battery technology and replacement power technology we ensure network-independent electrical energy supply in the mobile and stationary area. In addition to battery analysis and technology, our core competencies are also project planning, sales and maintenance of stationary and mobile battery systems as well as energy storage systems, static uninterruptible power supply systems, safety lighting systems and power generators. We support national and international customers in these business areas. Our average annual turnover is around 7 million euros. A total of more than 50 people are employed at our two locations, the headquarters in Herzberg (administration, warehouse, service depot and a test laboratory for battery technology) and the branch in Seesen (Battery Care Station and competence center for the construction of lithium traction batteries).
